Summary

QA Automation Engineer with 8+ years of experience in UI and API automation for web and mobile platforms. Strong hands-on experience with Selenium, Cypress, Java, and REST API testing, integrated with CI/CD pipelines. Proven track record of reducing regression cycles and improving release quality through scalable automation. Open to relocation.

Experience

Synechron (Client: UBS) | Pune, MH

Lead QA Engineer | 02/2025 - Present

- Designed and enhanced scalable UI automation frameworks using Selenium, Java, TestNG, and BDD, improving automated coverage of critical banking workflows.
- Implemented API automation with Rest Assured for microservices-based systems, strengthening backend validation and reducing integration defects.
- Integrated automated test execution into Jenkins CI/CD pipelines, enabling continuous testing and faster feedback on builds.
- Conducted root cause analysis for recurring defects and strengthened regression and smoke test strategies to reduce production leakage.
- Mentored junior QA engineers on framework design, automation best practices, and Agile test processes.

Vegrow | Pune, MH

Senior QA Engineer | 10/2021 - 01/2025

- Built and maintained a Selenium-based automation framework, reducing manual regression effort by ~50% and improving release confidence.
- Expanded API automation coverage by ~25% using Rest Assured, improving validation of microservices integrations.
- Integrated test suites with Jenkins and GitHub Actions CI/CD, accelerating feedback loops and improving build stability by ~40%.
- Executed cross-browser and cross-device testing to ensure UI consistency and performance across environments.
- Led and mentored a 4-member QA team, improving delivery quality through clear test strategy and prioritization.

Dkatalis | Pune, MH

QA Engineer | 04/2021 - 09/2021

- Developed and executed UI automation using Selenium and Java for responsive web applications.
- Performed exploratory testing to uncover usability gaps and edge-case defects.
- Validated multi-browser and multi-device behavior; logged and prioritized defects in JIRA.

AgroStar | Pune, MH

Software Development Engineer In Test(SDET) | 09/2017 - 03/2021

- Enacted the design and creation of a framework for testing, including test step creation, project maintenance, and deployment of the framework to Jenkins server for Continuous Testing (CT).
- Generated test estimates for CRM project(Salesforce App) user stories in JIRA and managed defect logging.
- Created a suite to test features in different development environment like staging, pre-prod etc
- Categorized bugs based on their severity and reported them to developers Analyzed, designed, documented, and executed test scenarios.
- Conducted regression testing of applications for every new build released.

Skills

Core Java, Python, Docker, Rest Assured (API, Selenium, Appium, Frameworks, BDD, TDD, LCC, Cypress, Kubernetes, AWS, GitHub, Confluence, Groovy, Jenkins

Education

Pune University

Bachelor of Engineering (Computer Science) | 05/2016
